MonaVie Active Cleared for Use by Athletes

To Whom It May Concern:

As president elect of the NBA Physician's Association and team physician/orthopedic surgeon for the NBA's Utah Jazz, I understand the athlete's desire to continually improve performance and prevent injury, while staying within the guidelines that have been established for amateur and professional athletes regarding banned substances.

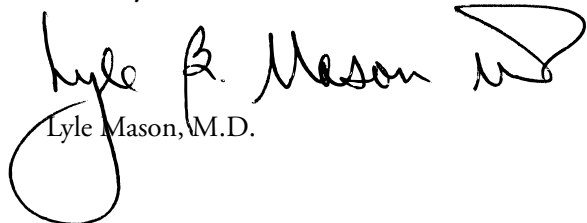

MonaVie's product development team has been working diligently to ensure that MonaVie products are safe for use by athletes. I'm pleased to inform you that MonaVie Active Juice has been scientifically tested and proven to be free from all banned substances, as certified by the World Anti-Doping Agency (WADA).

The testing done on MonaVie Active Juice covers banned substances (parent drug and metabolites) representing the 2007 WADA Prohibited List, which consists of over 170 substances. The substances tested are from the following six categories: (1) betablockers, (2) diuretics, (3) narcotics, (4) anabolic steroids, (5) stimulants, and (6) masking agents. For a complete list of what MonaVie Active Juice was tested for, send an e-mail to productscience@monavie.com.

MonaVie sought validation of its product regarding banned substances because an increasing number of high profile amateur and professional athletes are beginning to use and promote the product.

MonaVie Inc. is a dynamic nutritional beverage company with operations in markets around the world. With a blend of the Brazilian açai berry and 18 other nutrient-dense fruits, MonaVie brand products are designed to provide the antioxidants and phytonutrients needed to maintain a healthy and active lifestyle. MonaVie Active Juice is an advanced formula that offers the added benefits of esterified fatty acids and glucosamine to support healthy joint function. For more information, visit www.monavie.com.

Sincerely,

Lyle Mason, M.D.
